# STAT 489-01: Bayesian Methods of Data Analysis

Problem Set 8½

Assigned 2017 April 6
Due 2017 April 13

## 1  Second Chances

Re-do any problem from a previous problem set. Your grade will replace the original grade on that problem. Transcriptions of the solutions will not accepted (and won't help you very much). If you choose an analytical problem, be sure to explain in your own words why each non-trivial step is justified. If you choose a numerical problem, re-do the simulation in your own code (and not with the same random number seeds!)
